**For The Suppression Of Volunteer Rye And Downy Brome  
(Cheatgrass) In Wheat**

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR PEST CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

**DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Follow all applicable directions, restrictions, and precautions including statements pertaining to the Worker Protection Standards, on the EPA-registered Gramoxone Max Herbicide label.

This label must be in the possession of the user at the time of application.

Postemergence broadcast (salvage) spray for the suppression of volunteer rye and downy brome (cheatgrass) present in sufficient quantities so that wheat yield and quality may be reduced.

USE DIRECTIONS		
Use Pattern	Rate Per Acre	Spray Volume per Acre
Postemergence Broadcast application	5.4 to 7.9 fl. oz for Volunteer Rye 7.9 fl. oz for Downy Brome	Ground: 20 to 40 gallons; Air: 5 to 20 gallons

Apply in 20 to 40 gallons spray mix per acre as a ground broadcast application, or in 5 to 20 gallons spray mix by air. Apply after wheat plants have developed five tillers or six inches in height in the spring and prior to emergence of the head from the boot. Failure to comply with these instructions increases the chance of crop injury and may result in illegal GRAMOXONE MAX residue in the grain. Yield reductions may occur at any stage of growth. Add a nonionic surfactant containing at least 50% surface active ingredient at 1-2 pints per 100 gallons of dilute spray. Do not graze treated fields or feed treated forage or straw to livestock.

The salvage spray should only be used when wheat production is in danger of being severely reduced by rye or downy brome (Cheatgrass) competition and where reseeding is the only other alternative. Yield reductions can be expected in exchange for improved quality.

**CHEMIGATION: Do not apply this product through any type of irrigation system.**
